논문 주제 선정을 위한 Study

(Tentative) A study of integrated optimization method for Azipod electric propulsion ships

Woo Jin Kim [1], Shin Hyung Rhee [1]

Seoul National Univ., Seoul, Korea

Principle to select a topic for research

- Contribution to SNUTT laboratory
  - Firstly consider whether the topic is well aligned to SNUTT's mission
  - Secondly consider whether the research topic is meaningful and leading the NAOE area.
  - Considering the possibility to make HHI-SNUTT joint research project

- Aligned to Researcher's career and interest
  - Belongs to ship performance research department (HHI/DSME)
  - Mainly involved in hull optimization research project in HHI for several years.
  - Highly related to propeller, rudder and ESD development
  - Highly related to model test for validation of development.

- Aligned to Company's future plan and benefit
  - Develop Eco-Ship by reducing fuel consumption and hazard material
  - Achieve carbon neutral ships as a final mission

Environmental regulations

- Trend of tighter environmental regulations
  - Due to tighter decarbonization regulation green fuel, decarbonization technology application and acceleration of replacement for old conventional vessel are expected.
  - Discussion for LCA(Life Cycle Assessment) has been started.

    * WTW(Well-to-Wake) ㅡ TTW(Tank-to-Wake)

- GHG : Green House Gas
- CII : Carbon Intensity Indicator (operating data)
- EEDI : energy Efficiency Design Index (new building)
- EEXI : Energy Efficiency Existing-ship Index (existing)
